WAVE 3 Window Vent Panel — full-size cut pattern

Driver-side sliding door, Appendix J (Option B). Panel 34 11/16" x 9 3/4"; intake 6 1/8", exhaust 5 1/16", centers 4 7/8" down, 9 11/32" in from each end, 16" apart.

1. Print double-sided (flip on SHORT edge), Letter, landscape, at 100% / Actual size, NOT Fit. Check the 1" square below.
2. On pages B-D and row 2, cut off the margin on the dashed TRIM line (left edge, and top edge on row 2).
3. Row 1: lay B1's trimmed edge on A1's blue line, match the targets and lines (hold to a window), then C1, D1.
   Tape each seam on the back where the backs show the tape strip. Row 2 the same, then onto row 1's bottom strip.
4. Lay the pattern on the poster board with the INSIDE FACE up, square to a factory corner if you can.
   Tape it down all round. Hold the overlap's board edge flat where it crosses the intake hole.
5. Cut the outer black line through pattern and board with a box cutter and straightedge.
6. Cut the holes on the red dashed circles first (1/8" small). Open them up to the black line as you fit the collars.
7. Blue dashed lines are where the channels and glass grip the panel. They are not cut lines.
8. Peel the pattern off, or leave it on and write the fit results on it. Then test-fit in the window (Template sheet).

Assembly map (inside face up, front of the van on the right)

Lines

- cut (final line)
- rough-cut the holes here first
- channel / glass grip, do not cut
- hole center line
